

Nikola Milosavljevic

Software Engineer

Passionate software developer with experience in backend application development, cyber security and expertise in DevOps and SRE. Capable of creating highly performant, scalable and secure systems. Overall positive, teamwork oriented person who possesses excellent communication skills and is committed to continuous learning and improvement.

WORK EXPERIENCE

SRE and DevOps engineer
Dfinity, Zurich

10/2022 - Present

Some of the companies efforts are open source and relevant work can be found in the companies github and the teams github

Achievements/Tasks

- Played a crucial part in the migration of the entire observability stack from cloud based to on-premise infrastructure, reducing operation costs while improving control over tooling and data retention.
- Rebuilt end-to-end observability pipelines for metrics, logs, traces and alerts achieving better availability while cutting down costs.
- Extended open source tools (e.g. Vector.dev) to add custom capabilities tailored to the specific performance and integration needs.
- Contributed to the core development of the Internet Computer, designing and implementing a high performance and fault tolerant discovery system.
- Developed and maintained a large-scale test automation framework and testing farm, enabling continuous verification of system reliability and readiness for releases
- Engineered and optimized core smart contracts, adding new features and improving reliability of existing components.
- Built a node allocation and topology optimization tool, automating the creation of decentralized subnets based on complex security and distribution constraints.
- Automated critical deployment and rollout workflows, used weekly by both internal engineering teams and the open-source community to deliver stable network upgrades with minimal downtime.

Backend microservice developer
Schneider Electric, Seville

03/2021 - 10/2022

Achievements/Tasks

- Developed high-performance solutions for processing data from electrical and water meters.
- Implemented a billing determinant module in .NET, NServiceBus, MSMQ and MSSql.
- Was involved in an initiative to transition to Kubernetes and containers.

EDUCATION

Bachelor And Masters in Electrical and Computer Engineering
Faculty of technical sciences, Novi Sad

09/2018 - 07/2022 *Novi Sad, Serbia, 9.75/10*

SKILLS

Rust | Python | go | .NET | k8s | Docker | CI/CD | SQL | NoSQL | Microservices | Terraform

OTHER PROJECTS

Sotex Box - Founding engineer & Team Lead (ongoing hobby project)
(07/2024 - Present)

- Founded and led a team of 4 engineers, guiding the project's technical vision and establishing a collaborative, high-ownership culture.
- Built a fully automated CI/CD pipeline to support rapid iteration, testing and deployment across edge devices.
- Developed a custom Docker-based testing framework, enabling reproducible integration tests and local simulation.
- Instrumented the system with metrics and logging, ensuring visibility into performance and delivery reliability
- Designed and implemented the initial system architecture, focusing on scalability, offline resilience and efficient content delivery.
